EXPERIENCE

Circleback (YC W24) — **San Francisco, CA**
Software Engineer — June 2026 - Present

- Led GEO, growing Circleback's AI visibility from 2% to 16% in 1 month. Built an in-house benchmark tracking how ChatGPT, Claude and Gemini recommend AI notetakers, and orchestrated ~10 AI agents shipping content across 4 review sites.
- Built circleback-security, an autonomous AI security team on Claude Mythos 5.2 that hunts vulnerabilities across Circleback's codebase. Designed a hypothesis-driven pipeline where agents propose exploits, test them in isolated sandboxed replicas of the app, and only findings re-proven by deterministic code reach human review.
- Built Circleback's AI support agent (cb) on Vercel's eve, now autonomously handling 91% of support threads with a 25-second median first response, vs 3.7 hours for humans.
- Shipped PLG self-serve pricing (Free + Pro trial, in-app checkout, tiered Enterprise) as weekly signups grew 33%.

Obel labs — **CABA, Argentina**
Software Engineer — September 2025 - February 2026

- Shipped high-performance Next.js pages for Grammy-winning artists, serving 2M+ daily requests and hundreds of thousands of unique visitors. Implemented DDoS mitigation and edge caching strategies ensuring 99.9%+ uptime during viral traffic spikes.
- Built a conversational analytics AI agent that translates natural language into SQL queries across 17 ticketing platforms in 5 Latin American markets, with a semantic catalog layer to prevent hallucinated queries, sandboxed query execution, and real-time chart generation. Feeding C-level reporting with a 100% query accuracy rate
- Built HANG, a two-sided creator-brand marketplace, leading backend infrastructure: Postgres database, API layer, and authentication system.
  - Designed and deployed AWS infrastructure (EKS, ElastiCache/Redis) to support production launch to +15k waitlist users.
  - Collaborating across React Native mobile app and Next.js backoffice, driving technical decisions to ship V1.

PROJECTS

Easyfit.com.ar — **Remote, Argentina**
Co-Founder & CTO — April 2025 - November 2025
Same-day fashion delivery marketplace with try-before-you-buy model

- Designed real-time logistics system using Socket.io to match customers with nearby riders, enabling 45-minute delivery windows, with precise coordinates and mongodb geospaces.
- Built full platform from scratch: Next.js storefront (Vercel), Nodejs backend APIs (AWS ECS/EC2). Integrated Mercado Pago for secure checkout and payment processing.
- Onboarded 15 retail stores and 2,000+ unique products onto the platform. Hired and led 2 developers, owning all technical decisions across infrastructure, backend, frontend, and mobile.

FELLOWSHIPS & HACKATHONS

- Puentes III Fellow, Antigravity Capital (May 2026): one of 16 engineers selected from Latin America
- Judge, YC Startup School Taipei hackathon (c0mpiled-18, Nov 2026) and c0mpiled-15 Tokyo (Dec 2026)

EDUCATION

Argentine University of Enterprise (UADE) — **CABA, Argentina**
Software Development student — March 2023 - July 2025

SKILLS

- Languages: TypeScript, Python, Rust, SQL
- AI & Agents: Multi-agent systems, tool calling, MCP servers, Vercel AI SDK, eve, Claude API, OpenAI API
- AI Tools & Evals: Claude Code, Cursor, LLM-as-judge benchmarks, agentic security review, voice AI
- Backend & Data: Node.js, NestJS, FastAPI, REST APIs, Socket.io, PostgreSQL, MongoDB, Redis, Drizzle ORM
- Frontend & Mobile: React, Next.js, React Native, Expo, Tailwind CSS
- Infrastructure: AWS, Kubernetes, Docker, Vercel, DigitalOcean, CI/CD, GitHub Actions, Turborepo
- Spoken Languages: Spanish (native), English (C1)
